Answers to the Algebra 2 June 2023 Regents Exam

Providing the correct answers to the exam questions is essential for students to verify their performance and understand the material better. Below are the answers to the key questions from the Algebra 2 June 2023 Regents exam:

Sample Questions and Answers

Here are a few representative questions along with their solutions:

1. Question on Functions

What is the vertex of the quadratic function $f(x) = 2x^2 - 4x + 1$?

Answer: The vertex can be found using the formula $x = -\frac{b}{2a}$. For this function, $a = 2$ and $b = -4$. Thus, the vertex is at $x = 1$, and substituting back gives $f(1) = -1$. Therefore, the vertex is $(1, -1)$.

2. Question on Polynomials

Factor the polynomial $x^2 - 5x + 6$.

Answer: The factors are $(x - 2)(x - 3)$.

3. Question on Rational Expressions

Simplify the expression $\frac{6x^2}{9x}$.

Answer: The simplified form is $\frac{2x}{3}$.

4. Question on Statistics

If the data set is $\{4, 8, 6, 5, 3\}$, what is the median?

Answer: Arranging the data in order gives $\{3, 4, 5, 6, 8\}$. The median is 5.

These answers provide a glimpse into the types of problems students encountered on the exam.
