Detailed Answers to the January 2023 Algebra 2 Regents

In this section, we will provide comprehensive answers to the questions posed in the January 2023 Algebra 2 Regents exam. Each answer will include explanations and step-by-step solutions to enhance understanding and retention.

Question 1: Functions

The first question in the exam focused on identifying the properties of a given function. Students were required to analyze a function represented in multiple forms, including a graph and an equation. The correct answers involved determining the function's domain, range, and any asymptotic behavior.

Question 2: Quadratic Equations

This question asked students to solve a quadratic equation using the quadratic formula. The formula is given by:

$$x = (-b \pm \sqrt{b^2 - 4ac}) / 2a$$

Students were expected to substitute the values of a , b , and c from the equation into the formula to find the roots.

Question 3: Systems of Equations

In this section, students needed to solve a system of equations using both substitution and elimination methods. Clear instructions outlined the steps for both methods, and students were required to show their work for full credit.

Question 4: Polynomials

This question involved factoring a polynomial expression completely. Students were required to identify common factors and apply techniques such as grouping or using the quadratic formula when necessary.

Question 5: Statistics

The exam included a statistics question that asked students to interpret data from a graph. Students had to calculate the mean, median, and mode of a given dataset, demonstrating their understanding of statistical measures.
