Understanding Heart Anatomy

To appreciate the value of printable heart anatomy coloring pages, it is crucial to understand the heart's anatomy. The human heart is a muscular organ responsible for pumping blood throughout the body. It consists of four main chambers: the right atrium, right ventricle, left atrium, and left ventricle. Each chamber has a distinct function in the circulatory system.

Parts of the Heart

The heart is divided into several key parts, each contributing to its overall function:

- **Valves:** Four valves (tricuspid, pulmonary, mitral, and aortic) ensure blood flows in one direction.

- **Septum:** The wall that separates the left and right sides of the heart.
