Understanding the Biology Degree Plan at UTA

The biology degree plan at UTA is structured to provide students with a solid foundation in the biological sciences while allowing for flexibility in course selection. The program is designed to meet the needs of students interested in various fields such as medicine, research, environmental science, and biotechnology. UTA's biology curriculum emphasizes critical thinking, laboratory skills, and practical application of biological concepts. Students are encouraged to engage in research opportunities and internships to enhance their educational experience.

Program Duration and Structure

The biology degree at UTA typically requires four years of study, culminating in a Bachelor of Science in Biology. The program is structured to include a mix of core science courses, laboratory

work, and electives. The academic calendar follows a traditional semester system, allowing students to complete their coursework in a timely manner. Students must maintain a minimum GPA to remain in the program and are advised to plan their degree path early on.
