The primary types of plans include DSL, fiber, and fixed wireless internet services. Each type of service has unique features, speeds, and capabilities that cater to different business requirements.

DSL Internet Plans

Digital Subscriber Line (DSL) internet is a reliable option for businesses that are located in areas where fiber optics are not yet available. AT&T's DSL plans provide decent speeds suitable for everyday business activities such as email, browsing, and video conferencing. While not as fast as fiber options, DSL can still support small to medium-sized businesses effectively.

Fiber Internet Plans

AT&T's fiber internet plans are among the fastest available, with speeds reaching up to 1 Gbps or more. Fiber internet is ideal for businesses that require high-speed connections for activities like cloud computing, large data transfers, and high-definition video streaming. The reliability and speed of fiber make it a top choice for businesses that rely heavily on internet connectivity.

Fixed Wireless Internet Plans

For businesses located in rural or remote areas, AT&T offers fixed wireless internet plans. This service utilizes radio signals to provide internet access, making it accessible where traditional wired connections may not be feasible. Fixed wireless plans can offer competitive speeds and are suitable for businesses with moderate internet usage needs.

Assess Your Internet Needs

The first step in choosing the right plan is to evaluate your business's internet needs. Consider the following factors:

- **Number of Users:** How many employees will be using the internet simultaneously? More users typically require higher speeds.

Monthly Fees

Each internet plan comes with a monthly fee that typically varies by speed and service type. It is essential to consider what your budget allows while still meeting your business needs.
