Understanding the Structure of MCQs

Format of the 2018 AP Calculus AB MCQ

The 2018 AP Calculus AB exam consisted of 45 multiple-choice questions divided into two sections. The first section contained 30 questions that were designed to test students' understanding of fundamental concepts and their ability to apply calculus principles to solve problems. The second section included 15 questions that were more complex and required deeper analytical thinking.

Each question in the MCQ section presented a specific scenario or problem, followed by four possible answer choices. Students were required to select the most appropriate answer, and no points were deducted for incorrect answers, encouraging students to attempt all questions. This structure emphasizes not only knowledge of calculus concepts but also the ability to interpret and analyze mathematical scenarios.

Scoring Criteria

The scoring for the MCQ section is straightforward. Each correct answer awards one point, while unanswered questions receive no points. Incorrect answers do not negatively impact the score, making it essential for students to answer every question, even if they are unsure. The cumulative score from the MCQ section contributes significantly to the overall exam score, which is then converted to a 1 to 5 scale for the AP grading system.
