The pre calculus honors syllabus encompasses a broad range of topics that are essential for developing a strong mathematical foundation. These topics can be categorized into several key areas:

## Functions and Their Properties

Functions are a central theme in pre calculus, and students will explore various types of functions, including:

- Linear Functions
- Quadratic Functions
- Polynomial Functions
- Rational Functions
- Exponential and Logarithmic Functions
- Trigonometric Functions

Students will learn how to analyze these functions, understand their graphs, and apply transformations to them. Emphasis is placed on function composition and inverses, fostering a comprehensive understanding of how different functions interact with one another.

## Trigonometry

Trigonometry is a vital component of the pre calculus honors syllabus. Students will delve into the study of angles, triangles, and trigonometric functions. Key areas of focus include:

- Unit Circle and Radian Measure
- Trigonometric Identities and Equations
- Graphing Trigonometric Functions
- Applications of Trigonometry in Real-World Scenarios

This section aims to provide students with a solid understanding of trigonometric concepts, which are essential for calculus and further studies in mathematics and physics.

## **Analytical Geometry**

Another critical area of study in pre calculus honors is analytical geometry. This involves the study of geometric figures using algebraic equations. Key concepts include:

- Conic Sections (Circles, Ellipses, Parabolas, Hyperbolas)
- Distance and Midpoint Formulas
- Slope and Equation of a Line
- Systems of Equations and Inequalities

Through analytical geometry, students will learn how to interpret and solve geometric problems using algebraic techniques, bridging the gap between algebra and geometry.

## **Sequences and Series**

Students will explore sequences and series, learning about arithmetic and geometric sequences, as well as the concept of limits. This topic prepares students for understanding the foundational principles of calculus.
