One of the most significant additions is the inclusion of chemical elements and compounds, reflecting those found in real-life chemistry. Players can experiment with these elements to create new materials and items, which can lead to a deeper understanding of chemical interactions. The mod provides a chemistry interface that allows users to mix elements and compounds safely.

Chemical Elements and Compounds

The mod includes a wide range of chemical elements, each represented by its atomic symbol. Players can utilize these elements to create compounds, engaging in experiments that mimic real-world chemistry. The following elements are typically featured in the mod:

- Hydrogen (H)
- Oxygen (O)

- Carbon (C)
- Sodium (Na)
- Chlorine (Cl)
- Iron (Fe)
- Gold (Au)
- Silver (Ag)

By combining these elements in various ways, players can create a range of useful compounds, such as water (H₂O), salt (NaCl), and even more complex substances, enhancing their in-game capabilities.

Chemistry Lab Interface

To facilitate experimentation, the mod introduces a chemistry lab interface. This user-friendly interface allows players to see their available elements and compounds, as well as the results of their chemical experiments. Players can drag and drop elements into the lab to begin mixing them, providing an engaging way to learn about chemical reactions.
