The Operational Framework of CIGX

The operational framework of CIGX is designed to facilitate secure and efficient trading of digital assets. This framework includes various components that work together to create a functional marketplace.

Exchange Structure

CIGX operates as a centralized exchange, meaning it acts as an intermediary between buyers and sellers. The exchange structure includes:

- **Order Book:** A list of buy and sell orders that provides transparency and liquidity to the market.
- **Trading Pairs:** The ability to trade different cryptocurrencies against one another enhances market activity.
