The introduction of county cricket in England and the formation of international matches laid the foundation for a professional approach to the game.

As the sport gained popularity, especially in former colonial countries like India, Australia, and South Africa, the economic model began to shift dramatically. The commercialization of cricket was accelerated in the late 20th century, particularly with the introduction of limited-overs cricket and the inaugural Cricket World Cup in 1975. This event not only showcased cricket on a global stage but also opened avenues for significant financial investment and sponsorship.
