Overview of the Economics Degree at UCF

The economics degree at UCF is designed to equip students with the analytical and quantitative skills necessary to understand and interpret economic data. The program offers both Bachelor of Arts (BA) and Bachelor of Science (BS) degrees, allowing students to choose a path that aligns with their career goals. The BA emphasizes liberal arts, while the BS focuses more on quantitative analysis and technical skills. This flexibility enables students to tailor their educational experience according to their interests and career aspirations.

Students enrolled in the economics program benefit from a faculty comprised of experienced professionals and researchers who bring real-world insights into the classroom. This exposure enhances the learning experience and prepares students for a competitive job market. UCF's location in Orlando, a thriving economic hub, also provides students with ample internship and

networking opportunities, further enriching their educational journey.

Curriculum and Specializations

The curriculum for the economics degree at UCF is comprehensive and structured to provide students with a solid foundation in economic theory and practice. Core courses typically include microeconomics, macroeconomics, econometrics, and international economics. These courses offer students a deep understanding of how economic systems function and the factors that influence economic decision-making.

Core Courses

- Microeconomics: Analyzing individual and firm behavior in markets.
- Macroeconomics: Understanding economic aggregates and national economic policies.
- Econometrics: Applying statistical methods to economic data for analysis.
- International Economics: Exploring trade, finance, and global economic interactions.

In addition to core courses, UCF offers various specializations within the economics degree program. These specializations allow students to focus on areas of particular interest, such as:

- Financial Economics: Combining finance and economic principles.
- Behavioral Economics: Studying the psychological factors affecting economic decisions.
- Public Economics: Analyzing the role of government in the economy.
- Environmental Economics: Addressing economic impacts on the environment.
