The London School of Economics was founded in 1895 by a group of social scientists, including Beatrice and Sidney Webb, George Bernard Shaw, and Graham Wallas. Their vision was to create an institution that would advance the study of social sciences, particularly economics, and develop a scientific approach to social problems. The establishment of LSE came at a time when the industrial revolution was transforming economies and societies across the globe.

Initially, LSE was part of the University of London, and it distinguished itself by focusing on practical economics and social research. The school's early curriculum emphasized the

importance of empirical research and its application to real-world issues, setting a precedent for future academic inquiry. Over the decades, LSE has evolved into one of the leading institutions for economic studies, attracting students and scholars from diverse backgrounds.
