A free enterprise system, also known as a market economy, is characterized by voluntary exchanges in the marketplace where prices are determined by competition among businesses and consumers. In a free enterprise system, transactions are made voluntarily between buyers and sellers. Both parties benefit from the exchange, leading to a more efficient allocation of resources. This principle is crucial in fostering a dynamic marketplace where consumer preferences drive business decisions.

Competition is vital in a free enterprise economy as it leads to innovation and improved quality of goods and services. Firms compete to attract customers, which often results in lower prices and more choices for consumers. This competition also incentivizes companies to innovate and

improve efficiency.

## **Consumer Sovereignty**

Consumer sovereignty refers to the idea that consumers dictate what goods and services are produced based on their purchasing decisions. In a free enterprise system, businesses must respond to consumer demands to succeed, ensuring that resources are allocated where they are most valued.
