Understanding the Cubes Math Strategy

The cubes math strategy is an acronym that stands for several key steps in problem-solving: Circle, Underline, Box, Evaluate, and Solve. By following these steps, students can systematically approach math problems, ensuring they do not overlook important details. The strategy not only aids in comprehension but also promotes critical thinking and analytical skills.

To break it down, let's look at each step in detail:

- **Circle:** Students start by circling the important parts of the problem. This helps them focus on what is being asked.
- **Underline:** Next, they underline key information and numbers which are essential for solving the problem.
- **Box:** Box any keywords that indicate the operation needed, such as "total," "difference," or "product."

- **Evaluate:** This step involves evaluating the information gathered and thinking about what the problem is asking.
- **Solve:** Finally, students solve the problem using the gathered information and check their work.

This structured approach not only simplifies the problem-solving process but also builds a strong foundation for future math skills.
