To pronounce "psychology" correctly, you should break it down into its phonetic components. The standard pronunciation in American English is /saɪˈkɒlədʒi/ (sigh-KOL-uh-jee). This breakdown reveals three syllables: "psych," "ol," and "ogy." The first syllable, "psych," has a silent 'p,' which often causes confusion. The second syllable is stressed, which means it should be pronounced more forcefully than the other syllables.

Regardless of the accent, the key elements remain the same, focusing on the silent 'p' and the stress on the second syllable.
