Understanding the Pokémon Pokédex

The Pokémon Pokédex serves as an encyclopedia for Pokémon species, providing trainers and fans with vital information. Since its introduction in the original Pokémon games, it has evolved significantly. Initially, the Pokédex only included the first 151 Pokémon, but as new generations were released, the number of entries skyrocketed, now encompassing over 900 Pokémon across various regions.

What is the Pokédex?

The Pokédex is a digital device that trainers use to record and research Pokémon they encounter. Each entry contains essential details such as the Pokémon's name, type, height, weight, abilities, and evolutionary stages. In addition to basic information, the Pokédex often includes interesting trivia about each Pokémon, including their habitats and the lore that surrounds them.

How is the Pokédex Organized?

The organization of the Pokédex can vary depending on the game version. Generally, Pokémon are categorized by their National Dex number, which is a sequential number assigned to each Pokémon species. Other categorizations include:

- Type (e.g., Water, Fire, Grass)
- Region (e.g., Kanto, Johto, Galar)
- Evolutionary Line
- Generation (e.g., Gen I, Gen II, etc.)

This organization allows trainers to navigate the vast world of Pokémon easily and find specific Pokémon based on their needs or interests.
